Declaration of Academic Integrity

I confirm that this bachelor's thesis is my own work and I have documented all sources and material used.

I am aware that the thesis in digital form can be examined for the use of unauthorized aid and in order to determine whether the thesis as a whole or parts incorporated in it may be deemed as plagiarism. For the comparison of my work with existing sources I agree that it shall be entered in a database where it shall also remain after examination, to enable comparison with future theses submitted. Further rights of reproduction and usage, however, are not granted here.

This thesis was not previously presented to another examination board and has not been published.

Garching, 15.04.2026

Introduction

For exposes, create this chapter, plus start with chapter 2 (Related Work).

Motivation

Why are we doing it? About 1 page.

Research Questions

At least 3 questions. They should not be answerable yes/no. Questions should be questions (1 sentence). But you are allowed to explain them in more detail. In the explanation also tell how you plan to prove that your potential future solution is good.

About 1 page.

Contribution

What will/have I do/done that nobody else has done before. About 1/2 page.

Methodology

Design Science in Information System (Hevner). How are we doing research?

(1) Summary what design science is (it uses stakeholders, artefacts, steps, ...). (2) What are the stakeholders, artefacts, steps for MY case.

About 1.5 pages.

Evaluation

How will I evaluate that my proposal is good. This ties into the research questions.

About 1 page.

Structure

Which chapters will my thesis have, and what are they all about.

About 1/4 page.

User Interface Design

Implementation

Evaluation

Evaluation Setup

A qualitative evaluation was conducted with four expert users to gain insights into the usability and potential of the proposed system. The evaluation was carried out in the form of semi-structured interviews.

Figure 2
Modelling Workspace

A note describing the figure

At the beginning of the evaluation, participants received a brief introduction to the system to familiarise themselves with its main functionalities. The tasks included a simple example designed for participants to explore the system, followed by a more realistic process modelling task based on a real-world document. If time permitted, they could also use the system with their own documents.

After completing the tasks, participants were asked open-ended questions about what they liked and disliked about the system, as well as potential improvements and additional features. Additionally, they were asked whether they would consider using the system in the future to model processes from documents and to explain their reasoning. The interviews lasted approximately 40 minutes on average.
